Project Structure of React App

Readme.md → about your project & Installation steps.
(optional)

package.json → (Imp) - all dependencies (names) with their versions.

node_modules - Contains all the package/dependencies required for the React project to work.

Src (Source) - App.js → entry point of react app

Index.js → Shortly

public / index.html (only **html** file in whole react project)

SAP

if FB is Built inReact

& FB has many different pages

1 index.html

dont you feel that we have to

create multiple html pages?

but the good thing in that we can have

multiple routes(pages) →

Component (html) (JSX)

App.js

Screen

Index.js

selecting

index.html

< div id = root >

ReactDOM.render

injecting

displaying whatever in
then in App.js inside
the div tag

</ div >

displayed

html css

we will not directly write any html
Code Inside the div tag
